

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

**Robinson and Richmond on Birds from La Guaira, Venezuela.**<sup>1</sup> — This annotated list of 83 species is based on collections made by Captain Robinson in 1895 and 1900. The "identifications, descriptions of new species, and critical notes" are by Dr. Richmond and the field notes by Captain Robinson. One species, *Microcerculus pectoralis*, is described as new, and there are a few corrections of nomenclature. The proper generic name of *Falco uncinatus* Temm. (= *Regerhinus uncinatus* auct.) is given as *Chondrohierax* Lesson, 1843. — J. A. A.

**Embody's 'Birds of Madison County, New York.'**<sup>2</sup> — This list was presented as a thesis for the degree of Master of Science at Colgate University, and forms a brochure of 36 pages. It "is not supposed to be complete," being based mostly on the observations of the writer during the period 1895-1901, and includes for the most part only species actually taken by him, "whose object has been to put forth an accurate list rather than one great in numbers." The list proper, judiciously annotated, numbers 191 species, with a supplementary 'Hypothetical List' of 16 species. The paper is a welcome contribution to faunal literature. — J. A. A.

**Osgood's Contributions to the Natural History of the Queen Charlotte Islands and the Cook Inlet Region of Alaska.**<sup>3</sup> — During the field season of 1901 Mr. Osgood, with Mr. Edmund Heller as assistant, was sent to explore the Queen Charlotte Islands, British Columbia, and the Cook Inlet Region of Alaska, in the interest of the Biological Survey. A little over a month, June 13 to July 18, was devoted to the Queen Charlotte Islands, the three largest of the group, Graham, Moresby, and Prevost being visited. The weather proved very unfavorable, yet the results of the trip greatly increase our knowledge of these previously little known islands. A brief account is given of their discovery and previous slight exploration, of their physiography, flora, fauna, and life zones, and a bibliography of previous references of their natural history. An extensively annotated
